

Why ImagineX

ImagineX Consulting pairs best-of-breed technology and agile delivery methods with our boutique consulting model to help clients in reducing corporate risk and providing solutions for their most critical initiatives.

We work with companies ranging from Fortune 500 enterprises to emerging entities across our three primary practice areas: Cybersecurity, Software Engineering, and Technology Consulting.

Cybersecurity

We provide organizations with a holistic approach to cybersecurity, including the ability to predict, prevent, detect, and respond to security incidents in a fast-moving and distributed landscape.

Software Engineering & Cloud

ImagineX takes a *security first* approach to cloud design, automation, architecture, and software engineering while maintaining efficient, consistent, and reliable delivery.

Consulting

We focus on project delivery success, rooted in experience and pragmatic methods, from key roles on our client's strategic initiatives to driving enterprise system implementations.

Better, together.

As a Wiz Partner, ImagineX helps companies leverage the power of the Wiz CNAPP Platform. We work with our clients and the Wiz team to evaluate your requirements, assess current tooling, and develop a roadmap to operationalize Wiz according to your needs.

With our deep operational and technical experience across cloud security, digital transformation, cloud architecture, and automation, we will ensure the Wiz implementation is optimized and integrated across your existing security ecosystem to give you the confidence and visibility you need to know your cloud assets are secure.

Our cloud security consultants are experts in designing and implementing vulnerability management programs aimed at addressing the needs of our clients to meet regulatory compliance, identify and reduce critical risks, or implement best practices to secure your environments.
